Traffic Analysis Attack For Identifying User Online Activities

Traffic analysis is a serious threat over the network. An attacker can analyze network traffic patterns to infer packet's content, even though it is encrypted. This article demonstrates a traffic analysis attack that exploits vulnerabilities in encrypted smartphone communications to infer the web pages being visited by a user.

Technologies Used: Wireshark, Python, Network Packet Analysis Tools, Encryption Algorithms

60 Days

Ishield

Developed a full-stack web application that enables user registration, profile management, and role-based permissions. The platform features an advanced team and earnings management system, including referral tracking, hierarchical role-based commissions, and KYC document submissions. Key Features:

Technologies Used: PHP, MySQL, HTML, CSS, JavaScript, Bootstrap, AJAX

90 Days
